4. wire the ignition cable (red) to a 12v power supply

This is typically found at the cigarette lighter / 12V accessory socket or fuse box. Use a multimeter to confirm the wire has 12V only when ignition is ON. Connect using solder & heat shrink (recommended) or a suitable crimp connector. Do not connect to a permanent live feed.

5. Follow instructions on patch lead to enable steering wheel controls

6. Test the unit and make sure steering wheel controls work as intended before re-fitting the unit into the dashboard
